

Gonzo Bear Camp Information

Each season we use special formulated bear bait, which over the years has produced great results.

Each bait is set up with it's own trail cam before hunting starts.

We have enough bait available if a hunt has a mother and cubs on their bait. The average black bear harvested is usually between 150lbs, to 250lbs.

However, we have had bears up to 650lbs harvested from our camp and some years having award-winning bears.

Success is not limited to our bear hunts; fishing is over the top with many anglers sporting full stringers of fish.

As usual we spend many nights under the stars around the campfire exchanging great hunting stories!
